

Release Notes

Optisoft.NET v1.2.23138.1

24th May 2023

Issues

Patients Recall

- Addressed an issue that could cause blank lines in the address of a printed document
- Addressed an issue that could remove CC and BCC recipients from an email
- Addressed an issue where SMS would be sent to invalid mobile numbers in some instances
- Addressed an issue where Forwarded Emails would prefill with Patients email address

Appointments

- Addressed an issue where Find Next Appointment would ignore timeslots that had deleted appointments in previously
- Addressed an issue which cause Appointment Types to display multiple times in the maintenance

Clinical Records

- Addressed an issue where changing Patients during a visit would cause the visit to be on the previous patient.

Cash

- Addressed an issue where transactions done prior to Card Terminal would not refund by Card Terminal

Stock

- Addressed an issue where deleting model and options on a product would cause the historical stock transactions to be hidden
- Addressed an issue where Stock Takes can allocate stock to “incorrect groups”. This now works on First in First Out basis.
- Addressed an issue where the expected QTY could include other branches values
- Addressed an issue where “negative stock” wasn’t being dealt with subsequent Stock In transactions
- Addressed an issue where a supplier could be deleted that had a stock holding
- Addressed an issue where changing a products branch availability could revive deleted Models

Spectacles

- Addressed an issue where all lens extras were available when the Lens Supplier had none available
- Addressed an issue where Extras were remaining on a dispense after amending the given lens supplier
- Addressed an issue where Vouchers linked to automatically update were not displaying correct price
- Addressed an issue where Lens Search was showing lenses for all branches and not selected branch only

Release Notes

Contact Lenses

- Addressed an issue that could cause a previously entered product on a RX to pull through into Contact Lens Dispensing
- Addressed an issue which caused cancelled dispenses to still show in Find Dispense in Cash
- Addressed an issue in Lens Search where it was possible to select individual eyes on a both eyes dispense
- Addressed an issue where Lens Search was showing lenses for all branches and not selected branch only

EGOS

- Addressed an issue where GOS 1 PX Partner was requiring a NI
- Addressed an issue that could cause incorrect statuses being selected after using the Status Correction option
- Addressed an issue where Next Status was still available for Paid Claims

Templates

- Addressed an issue that could prevent email templates from saving
- Addressed an issue that could prevent Email merge codes from being applied

Reports

- Addressed an issue which caused the Suggested Order Report to include all branches values
- Addressed an issue in the Patient Transaction report where totals were not updating based on filter options
- Addressed an issue with the Sort Order of the Cash Day Sheet report

Release Notes
